JUST INTERNSHIP

HTML & CSS RESPONSIVE LANDING PAGE

Internship Report & Project Presentation

18 September 2026 – 20 September 2026

Certificate period as recorded by Just Internship

INTERNSHIP DETAILS

Slok Gupta

Roll No. 25SCS1003003228

B.Tech (Computer Science & Engineering)

Batch: 2025–2029

NEXA

Responsive Product Landing Page

Semantic HTML • CSS Theme • Flexbox/Grid • JavaScript Navigation

CERTIFICATE ID JI-2026-000023

School of Computer Science & Engineering

IILM University, Greater Noida, U.P.

Candidate & Internship Overview

ID Candidate Details

Student Name: Slok Gupta
Roll Number: 25SCS1003003228
Degree: B.Tech (Computer Science & Engineering)
Academic Batch: 2025–2029
University: IILM University, Greater Noida, U.P.

JI Internship Profile

Program Name: Just Internship
Specialization: HTML & CSS Responsive Landing Page
Internship Period: 18 Sep 2026 – 20 Sep 2026
Certificate ID: JI-2026-000023
Project: Nexa Responsive Product Landing Page

PROJECT SUMMARY

A responsive static landing page built with HTML5, CSS3 and Vanilla JavaScript, following four internship tasks covering structure, styling, responsiveness, navigation and deployment preparation.

Organization Profile: Just Internship

The supplied internship certificate identifies Just Internship as the internship provider and records the project as “HTML & CSS RESPONSIVE LANDING PAGE.”

01 Internship Environment

The task material was project-oriented and focused on practical frontend implementation. The work progressed from semantic structure to CSS styling, responsive layouts, mobile navigation and deployment preparation.

02 Officially Supported Details

Provider: Just Internship
Project domain: HTML & CSS Responsive Landing Page
Certificate ID: JI-2026-000023
Certificate period: 18 Sep 2026 – 20 Sep 2026
Learning emphasis: structure, styling, responsiveness and interaction

Note: This profile is intentionally limited to details supported by the supplied certificate and internship task material.

Problem Statement & Industry Context

The Industry / Learning Challenge

Students often learn HTML, CSS and JavaScript as separate concepts. The practical challenge is combining them into a complete, usable and responsive interface.

A landing page must maintain clear structure, consistent styling, responsive layouts and intuitive navigation across different devices.

The Solution Scope

The internship addressed this gap by taking a task-based approach: semantic HTML foundation → visual CSS theme → Flexbox/Grid responsiveness → JavaScript navigation and final deployment preparation.

The result is a complete static landing page that demonstrates the full frontend workflow.

Practical focus: build → style → adapt → interact → verify → prepare for deployment

Core Project Objectives

01 Semantic Structure

Create an organized HTML5 skeleton using meaningful structural tags and internal anchors.

02 Visual Theme

Apply CSS variables, typography, colors, spacing and reusable component styles.

03 Responsive Layout

Use media queries, Flexbox and Grid to support desktop, tablet and mobile screens.

04 Interaction & Deployment

Implement the hamburger menu, active navigation, UI effects and static-hosting preparation.

Target outcome: a polished, responsive landing page created without a frontend framework.

Technologies & Frontend Toolchain

H HTML5

Semantic page structure, section hierarchy and internal navigation.

C CSS3

Theme variables, typography, colors, spacing, cards and visual styling.

F Flexbox

Flexible alignment for navigation, buttons, rows and UI groups.

G CSS Grid

Multi-column layouts for hero, feature, testimonial and pricing sections.

R Media Queries

Responsive breakpoints for desktop, tablet and mobile layouts.

JS Vanilla JavaScript

Hamburger menu, active sections, scroll reveal and form behaviour.

GH Git / GitHub

Repository organization and final-code version management.

D Vercel / Netlify

Static hosting preparation for the finished landing page.

Responsive Frontend Architecture

The Nexa landing page uses a lightweight client-side architecture: HTML provides structure, CSS controls presentation and responsive behaviour, and JavaScript manages interaction.

1 Structure Layer

Semantic HTML5 sections and navigation anchors.

2 Presentation Layer

CSS variables, cards, typography, Grid, Flexbox and media queries.

3 Interaction Layer

Vanilla JavaScript controls menu state, active sections, reveal effects and form behaviour.

4 Delivery Layer

Repository preparation and static deployment workflow.

Internship Task Progression (Tasks 1 & 2)

TASK 1

TASK 2

1

Project Setup & Semantic HTML

Project folders • semantic header/nav/main/section/footer • internal anchor links

2

CSS Theme & Styling

styles.css • custom theme variables • Google Fonts • spacing and layout alignment

Progression: establish the structure first, then create a reusable visual system around it.

Internship Task Progression (Tasks 3 & 4)

TASK 3

TASK 4

3

Flexbox / Grid Responsiveness

Media queries • multi-column card grids • flexible wrapping • margin adjustments • overflow control

4

Navigation & Deployment

Hamburger menu • active navigation • scroll effects • final audit • GitHub + Vercel/Netlify preparation

Progression: make the layout adapt, then add real navigation behaviour and deployment readiness.

Key Features & Demonstrated Skills

- Semantic HTML5 elements and clear section hierarchy.
- CSS custom properties for a consistent theme.
- Typography integration using Google Fonts.
- Responsive layouts using CSS Grid, Flexbox and media queries.
- Mobile hamburger menu with JavaScript state control.
- Active navigation section detection during scrolling.
- Scroll-reveal interactions using IntersectionObserver.
- Client-side email validation and submission feedback.
- Static-hosting ready structure using index.html, style.css and script.js.

FINAL PROJECT

Nexa

Responsive Product Landing Page

Hero

Features

Workflow

Stories

Pricing

CTA

Three-file implementation

index.html • style.css • script.js

Implementation Highlights

1

Landing Page Structure

Hero, feature cards, workflow, statistics, customer stories, pricing, CTA and footer.

2

Responsive Navigation

Desktop links transform into a mobile hamburger menu with JavaScript-controlled open/close state.

3

Responsive Layout

Grid and Flexbox layouts adapt across desktop, tablet and mobile breakpoints.

4

Interaction Layer

Active sections, scroll-reveal animation and signup form validation improve the user experience.

5

Deployment Readiness

The project remains static and can be published through a repository and static hosting service.

Certification & Official Verification

Internship Title	HTML & CSS Responsive Landing Page
Issuing Organization	Just Internship
Certificate ID	JI-2026-000023
Certificate Period	18 Sep 2026 – 20 Sep 2026
Candidate	Slok Gupta
Roll Number	25SCS1003003228

CERTIFICATE PREVIEW

Source: supplied Just Internship certificate (Certificate ID JI-2026-000023).

The certificate confirms the candidate name, project title, certificate ID and internship period.

Thank You!
